

Free setup of super-secure Amazon EKS

High Plains Computing’s Kubernetes and Cloud security teams collaborated to create Terraform automation that can set up **production-grade** super-secure Amazon **Elastic Kubernetes Service** within days for cloud-native applications.

This Kubernetes is **ready for production** from day one with hundreds of security features pre-enabled. The figure below shows a few of the key highlights.

Key features include:

- Hundreds of security configurations, policies, and add-ons pre-configured as per best practices for Kubernetes security, including secure access, reduced attack surface area, workload protection, secrets management, and compliance with PCI DSS /SOC II.
- Full auditing, logging, and monitoring of control and data plane.
- Automated CIS Kubernetes benchmark assessment.
- Pre-configured ALB ingress controller and optional firewall protection.
- Options to add helm charts for Argo based CI/CD, Jenkins, Istio service mesh, or single sign-on services like KeyClock at a low fixed cost
- Full support for GPU Compute nodes and KubeFlow
- Option to purchase 24 x 7 Operational Support at a discounted rate of \$6000 per month
